

Secure Stack.[®] Convenience and Versatility

Designed to offer the ultimate in installation convenience and versatility for a variety of applications. Certified for commercial chimney, grease duct and diesel exhaust applications.

DESIGNED WITH PERFORMANCE IN MIND

Premium corrosion resistance and durability, the inner flue is constructed from 304 or 316 Stainless Steel and a 304, 316 Stainless Steel or Galvalume steel outer casing.

SIGNIFICANT COST AND TIME SAVINGS

Couplings are completely welded to the inner flue pipe for reinforced strength and to help prevent leakage. These couplings then extend the inner pipe up to the outside and allow sealing of the inner flue at the exterior of the pipe. This greatly reduces the temperature at the locking/sealing location. Plus, only one locking band is necessary as opposed to the two required for competitive products.
