

New Harman Adapters for Secure Pellet

Working with our Installers, Security Chimneys determined there is a need to offer a new version of our adapters for the **Harman Pellet Stove**. Security Chimneys has created two new adapters that will make the installation of Secure Pellet Vent easier and installer friendly. The two adapters have an anchor plate built into the base with a matching hole pattern for the Harman Stove. This allows the installer to remove the existing factory outlet and replace it with either the 3SPVADH-SC1 or 3SPVADH-SC2 adapter. The removal and replacement of the factory outlet has been approved by Harman Stoves.

Both adapters have the SPV twist-lock to make SPV connection simple and easy.

Some stoves have a hopper that prevents the installer from clearing the back of the stove with a tee right off the outlet. The 3SPVADH-SC1 gives the additional length needed to clear the pellet hopper and to go to vertical with a tee, allowing the stove to be placed closer to the wall. There is no need to use an additional horizontal pipe length.

If you need to use 4" diameter vent you simply attach either a standard 3SPVLW4 3"x 4" increaser or a 4SPVTABW3-1 Increaser Tee to convert to a 4" diameter system.

The current 3SPVADHB and 3SPVBLW4HAB's still work when connecting to the factory supplied outlet and will be continued to be supplied.

Our goal is to make installations as easy and fast as possible. This improvement is part of that commitment.

DESCRIPTION	Harman Pellet Appliance Adapter - Long	Harman Pellet Appliance Adapter - Short
A	5 3/4"	2 1/8"
ORDER #	3SPVADH-SC1	3SPVADH-SC2

3SPVADH-SC1:

Use on Harman Appliance with extended hoppers on the back.

3SPVADH-SC2:

Use on Harman Appliance to minimize distance from the wall.
