

ASHT & 2100 Laser Welded Inner Flue & Outer Sleeve

As part of our commitment to continuous improvement in our product lines and product offerings, we at Security Chimneys are proud to announce we have transitioned away from folded lock seams on ASHT and S2100 chimney lines and have implemented a laser welded inner flue & outer sleeve.

Moving forward all ASHT and S2100 will have laser welded seams on both the outer sleeve and inner flue.

Laser welding provides the end user many benefits including: Stronger seam joints, increased sealing that reduce opportunity for moisture to set in, and finally a better looking chimney with consistent shape and diameter.
